### OPERATION

- Clutch type hook allows door to be slammed and locked shut without the use of the key. Hookbolt can be released by handle or key from one or both sides of the door, and can be deadlocked by one full turn of the key towards the forend. A projecting stump on the forend engages into the locking plate to prevent the door being lifted when in the closed position.

### FEATURES

- Can be masterkeyed or keyed alike with other detainer mortice locks.

Note: See Sashlock section for dimension key.

## ADAMS RITE MS4043 Cylinder Guard

**Shield Ring :** 41mm x 11mm  
**Retainer Plate :** 62mm x 33mm  
**Finish :** Zinc Plated

### OPERATION

- The MS4043 offers three forms of defence against attack on the cylinder.
- 1. Outer shield ring is bevelled to offer poor grip for twisting.
- 2. The hardened steel material combined with the bevelled shape makes obtaining a tight grip on the ring virtually impossible.
- 3. The retainer plate on the back of the door prevents the cylinder being levered out in the event of a chisel type tool being driven into the stile behind the shield ring.
